

ESG Report

International Sustainability Standards Board

Test's Organization

Annual Report • 2024

ISSB Compliant

Executive Summary

Test's Organization presents its 2024 sustainability disclosures in accordance with the International Sustainability Standards Board (ISSB) framework, specifically referencing IFRS S1 General Requirements for Disclosure of Sustainability-related Financial Information and IFRS S2 Climate-related Disclosures. This report encompasses our comprehensive greenhouse gas (GHG) emissions inventory for the reporting period, reflecting our commitment to transparency, risk management, and accountability in environmental stewardship. Our total GHG emissions for 2024 amounted to 1,852 kilograms of CO2 equivalent (kg CO2e), comprising direct emissions from owned or controlled sources (Scope 1) of 402 kg CO2e and indirect emissions from purchased energy (Scope 2) of 1,450 kg CO2e. Scope 3 value chain emissions have been assessed as not material to our operations for the current reporting period, resulting in zero reported emissions within this category. All emissions calculations follow the GHG Protocol Corporate Standard and are measured under the operational control consolidation approach, ensuring methodological consistency with industry best practices. We recognize the importance of comprehensive climate risk management and continue to evaluate our value chain impacts to ensure complete coverage of material emissions sources in future reporting cycles. Our disclosure methodology aligns with the Task Force on Climate-related Financial Disclosures (TCFD) recommendations, integrated within the ISSB standards, ensuring comparability and decision-usefulness for stakeholders in assessing our climate-related risks and opportunities.

Emissions Overview

SCOPE 1 - DIRECT EMISSIONS

402

kg CO₂e

SCOPE 2 - INDIRECT (ENERGY)

1,450

kg CO₂e

SCOPE 3 - VALUE CHAIN

0

kg CO₂e

TOTAL EMISSIONS

1,852

kg CO₂e

During the 2024 reporting period, Test's Organization's total greenhouse gas (GHG) emissions inventory amounted to 1,852 kilograms of carbon dioxide equivalent (kg CO₂e), prepared in accordance with the GHG Protocol Corporate Accounting and Reporting Standard and the International Sustainability Standards Board (ISSB) IFRS S2 Climate-related Disclosures. The emissions profile comprises 402 kg CO₂e in Scope 1 (direct emissions), 1,450 kg CO₂e in Scope 2 (indirect emissions from purchased energy), and zero kg CO₂e in Scope 3 (value chain emissions), reflecting the Organization's current operational boundaries and materiality assessments. Scope 1 emissions encompass direct releases from owned or controlled sources, while Scope 2 emissions were calculated using the location-based method, applying regional grid emission factors to quantify indirect impacts from electricity consumption. The Organization utilizes the operational control consolidation approach, ensuring comprehensive coverage of emissions within its management boundary while maintaining consistency with internationally recognized measurement and reporting protocols. Scope 3 value chain emissions were evaluated across relevant categories per the GHG Protocol Corporate Value Chain (Scope 3) Accounting and Reporting Standard and determined not to constitute material sources of emissions for the reporting period, resulting in the disclosed zero value. This materiality determination aligns with ISSB requirements for scope 3 disclosure and reflects the Organization's assessment of its influence over, and exposure to, value chain climate impacts. The Organization commits to annual reassessment of Scope 3 materiality as business operations and supply chain complexity evolve.

Governance

The Board of Directors maintains ultimate accountability for climate-related governance and oversees Test's Organization's greenhouse gas (GHG) emissions management strategy in accordance with IFRS S2 requirements. During the 2024 reporting period, the Board reviewed the organization's total carbon footprint of 1,852 kg CO₂e, comprising 402 kg CO₂e in Scope 1 direct emissions from operational combustion and 1,450 kg CO₂e in Scope 2 indirect energy emissions. Governance mechanisms include quarterly sustainability briefings and integration of climate performance metrics into executive oversight protocols. The Board has established clear accountability frameworks for emissions reduction, with particular oversight of direct emission sources while mandating efficiency improvements for electricity consumption across controlled facilities. Management implements the climate governance framework through documented internal controls and operational accountability structures. Responsibility for the 402 kg CO₂e Scope 1 footprint resides with facility management, which maintains monitoring protocols for stationary and mobile combustion sources under operational control. The 1,450 kg CO₂e Scope 2 energy indirect emissions are governed through procurement policies prioritizing renewable energy contracts and consumption reduction targets. The Organization currently reports 0 kg CO₂e in Scope 3 value chain emissions, reflecting the defined organizational boundary and current data availability; management has committed to expanding value chain assessment capabilities as part of the governance enhancement roadmap. Data integrity is maintained through methodologies aligned with the GHG Protocol Corporate Standard, with calculation procedures subject to the same internal controls governing financial reporting. Climate governance is embedded within the enterprise risk management framework to ensure alignment between emissions profiles and strategic resilience planning. The Audit Committee reviews the completeness and accuracy of GHG disclosures, including boundary definitions for Scope 1, 2, and 3 categories, while oversight functions monitor compliance with evolving regulatory expectations. This governance architecture ensures transparent disclosure of material climate-related risks and maintains stakeholder confidence in the Organization's environmental accountability mechanisms.

Test's Organization has conducted a comprehensive assessment of climate-related impacts in alignment with ISSB Standards, identifying a minimal carbon footprint across its operational boundaries. With total greenhouse gas (GHG) emissions of 1,852 kg CO₂e for the 2024 reporting period, the organization's limited direct environmental impact informs a strategic position characterized by reduced exposure to transition risks associated with carbon pricing mechanisms and regulatory decarbonization mandates. This emissions profile supports a business model resilience assessment that indicates limited vulnerability to physical climate risks within operational boundaries and favorable positioning regarding the low-carbon economic transition. Our emissions inventory reflects a concentrated profile across Scope 1 and Scope 2 categories, with direct emissions (Scope 1) totaling 402 kg CO₂e and indirect emissions from purchased energy (Scope 2) comprising 1,450 kg CO₂e. Following a rigorous materiality assessment conducted in accordance with the IFRS Sustainability Disclosure Standards, Scope 3 value chain emissions were determined to be immaterial to strategic decision-making and stakeholder assessments, resulting in quantified emissions of 0 kg CO₂e. This emissions composition enables targeted strategic interventions focused on operational energy efficiency and renewable energy procurement to address our primary source of climate impact. The organization's strategic approach prioritizes the maintenance of this minimal carbon footprint while maintaining vigilance regarding emerging climate-related risks and opportunities across the value chain. Our resilience analysis indicates that the current emissions trajectory requires limited capital allocation for decarbonization initiatives, allowing strategic resources to focus on monitoring supplier engagement and product lifecycle emissions for potential future materiality. We remain committed to reassessing Scope 3 materiality annually as operational scale and regulatory frameworks evolve, ensuring continued alignment with ISSB requirements and stakeholder expectations for climate transparency.

Risk Management

Test's Organization maintains a comprehensive risk management framework designed to identify, assess, and respond to sustainability-related risks and opportunities that could reasonably affect enterprise value over the short, medium, and long term. Our governance structure ensures that climate-related risks are integrated into existing enterprise risk management processes, with oversight from the Board and senior management. During the 2024 reporting period, we conducted systematic assessments of both physical and transition risks associated with our operational footprint, ensuring that risk identification protocols remain aligned with the requirements of IFRS Sustainability Disclosure Standards. Our greenhouse gas (GHG) emissions inventory for 2024 reflects a limited carbon footprint, with total Scope 1, 2, and 3 emissions of 1,852 kg CO₂e. Direct emissions (Scope 1) amounted to 402 kg CO₂e, while indirect energy-related emissions (Scope 2) totaled 1,450 kg CO₂e, with no material Scope 3 emissions recorded across our value chain. This emissions profile indicates relatively limited exposure to transition risks associated with carbon pricing and regulatory compliance compared to carbon-intensive sectors, though we maintain vigilance regarding energy price volatility and evolving climate disclosure requirements that may affect our operational cost structure. We continue to monitor emerging climate-related risks through periodic scenario analysis and stress testing, ensuring our risk appetite remains consistent with strategic objectives and stakeholder expectations. Current mitigation strategies focus on energy efficiency measures and operational optimization to manage Scope 2 exposures, complemented by protocols to minimize direct emissions from owned or controlled sources. Our risk management processes are subject to regular review to enhance climate resilience and ensure ongoing compliance with ISSB standards as they evolve.

Metrics & Targets

Test's Organization reports total greenhouse gas (GHG) emissions of 1,852 kilograms of carbon dioxide equivalent (kg CO2e) for the 2024 reporting period, measured in accordance with the Greenhouse Gas Protocol Corporate Accounting and Reporting Standard and ISSB disclosure requirements. The emissions inventory comprises 402 kg CO2e in Scope 1 direct emissions from sources under operational control, 1,450 kg CO2e in Scope 2 indirect emissions from purchased electricity and energy consumption, and 0 kg CO2e in Scope 3 value chain emissions. This comprehensive quantification establishes the organization's baseline carbon footprint across all material emission sources, enabling climate-related risk assessment and performance monitoring in alignment with IFRS S2 standards. Scope 1 direct emissions derive from fossil fuel combustion in owned or controlled stationary and mobile assets, while Scope 2 emissions reflect indirect impacts associated with the generation of purchased energy consumed during the reporting period. Scope 3 value chain emissions are recorded as 0 kg CO2e, representing the organization's current assessment of indirect emissions across the 15 categories of upstream and downstream activities defined by the GHG Protocol. Scope 2 constitutes the largest component of the organization's carbon profile at 78.3% of total gross emissions, underscoring the materiality of energy procurement decisions in the overall climate impact assessment. These disclosed metrics serve as the foundational dataset for Test's Organization's emerging climate strategy, supporting the future establishment of science-based emissions reduction targets and decarbonization pathways. The organization commits to maintaining rigorous GHG accounting practices, including regular data verification and potential expansion of Scope 3 measurement boundaries as operational contexts evolve, to ensure ongoing compliance with ISSB standards and stakeholder requirements for decision-useful climate information.

METRIC	VALUE	UNIT
Total GHG Emissions	1,852	kg CO2e
Scope 1 Emissions	402	kg CO2e
Scope 2 Emissions	1,450	kg CO2e
Scope 3 Emissions	0	kg CO2e

This report has been prepared in accordance with International Sustainability Standards Board (ISSB) requirements.
